

AeroBi | GKN Filton Earned Hours & Productivity Report

Louis Llewellyn & Adryan Veira

MAKING THINGS FLY

An all-in-one Business Area - Value Stream – Cost Centre Earned hour & Productivity Report

Based on Microsoft Fabric the tracker can be viewed on a web browser or Microsoft PowerBi mobile app.

Fabric is currently in a trial period with GKN. Everyone with a Microsoft account currently will have access. You can log in now on www.microsoft.com/en-us/microsoft-fabric/getting-started - select 'Try for free' and enter your Microsoft log in details.

You will need an invite to the OpEx. Dashboard to view the reports.

The PowerBi app can be found in the app store on your mobile. Once logged in it will connect to your Fabric account. Once invited to the AeroBi dashboard you can access the report.

The report breaks down from Business Area to individual Cost Centres - dividing Earned Hours by Attended Hours, taken from SAP, to give a productivity percentage.

Microsoft Fabric

Power Bi

Fabric Web Browser

Once you have the OpEx. Dashboard invitation you can view the dashboard in your 'Workspaces'.

By selecting a report tile on the dashboard it will take you to the corresponding report.

The productivity report will be refreshed with the latest Earned Hours/Attended Hours data to the OpEx. Reporting dashboard before 8am each morning.

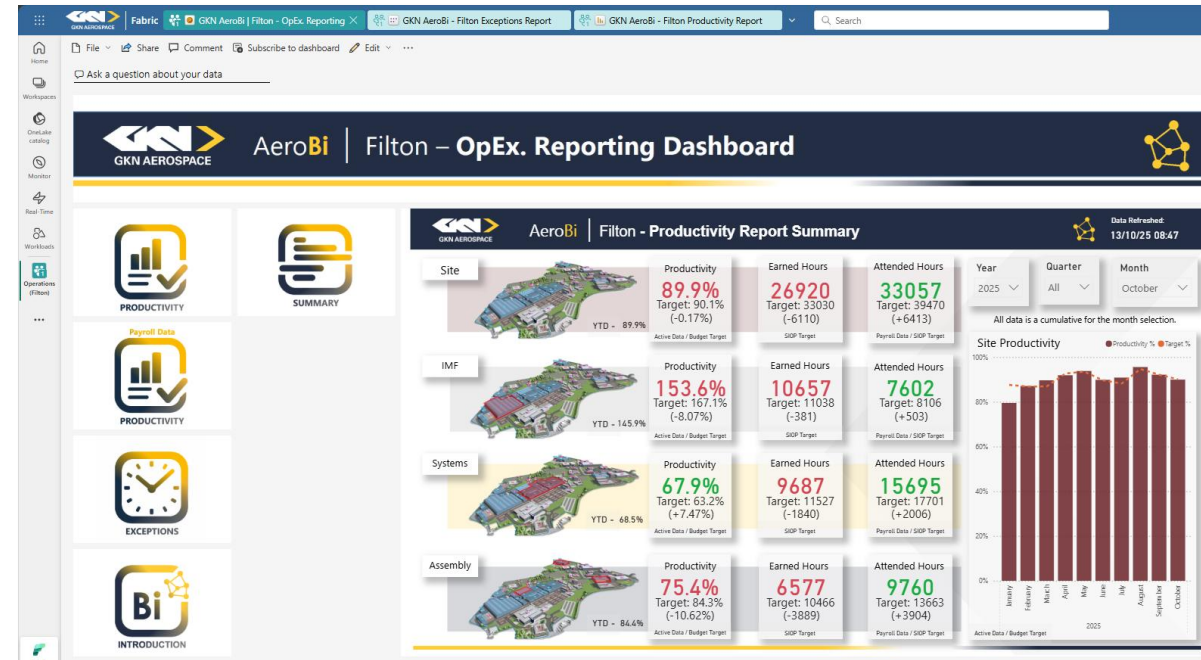

PowerBi App

The app will take you to your Fabric. By selecting the OpEx. dashboard it takes you to a report tiles page.

Selecting on the report will open it into a mobile view.

PowerBi can be added as an app into Teams.

All dashboards and reports, with permission to, will be available to view, share or add to a chat.

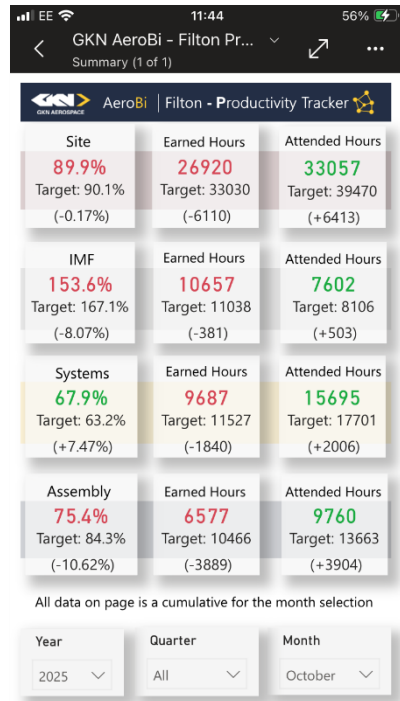

Productivity Summary Report

Fabric on web browser

The Summary page is a quick overview of each business area and Filton as a site.

All data is a cumulative for the date selected – Productivity, Earned Hours and Attended Hours.

The bar chart shows the site productivity for the year by month.

PowerBi on mobile app

The mobile view has the same data visuals.

Scrolling down will display the monthly bar chart.

Fabric Web Browser - Productivity Report

Use the dropdown filters for Dates and Business Area.

Business area will dynamically change the Value Stream and Cost Centre selection options.

Hovering over the dropdown boxes and selecting the eraser will clear filter

Green/Red visual shows what areas are above or below their target.

The farther an area is from its target, the larger the box appears.

There are report pages for Productivity, Earned Hours and Attended Hours, with an additional two pages to view and filter through the raw data that drives the Report pages.

The main graph shows the daily metric on the left y-axis, visualised as a bar chart, a cumulative metric on the right y-axis, visualised as a solid line with data points and a target visualised as a dashed line.

The bars are grouped for the areas, selecting a Cost Centre will adjust the bar to show how that area contributes to the groups overall data.

Clicking on a bar or line will show the data for that date.

Hovering the mouse over an area, bar, line or card will call out the latest data for that point.

The data cards show the area that the data is showing for, for example: Cumulative - Green is plus, Red is minus - Target, delta cumulative from target, and the previous day, if 'NA' is shown the report hasn't been updated or the month selection isn't for the current month.

Selecting a Business Area, Value Stream or individual Cost Centre will update the charts and data to the selected area.

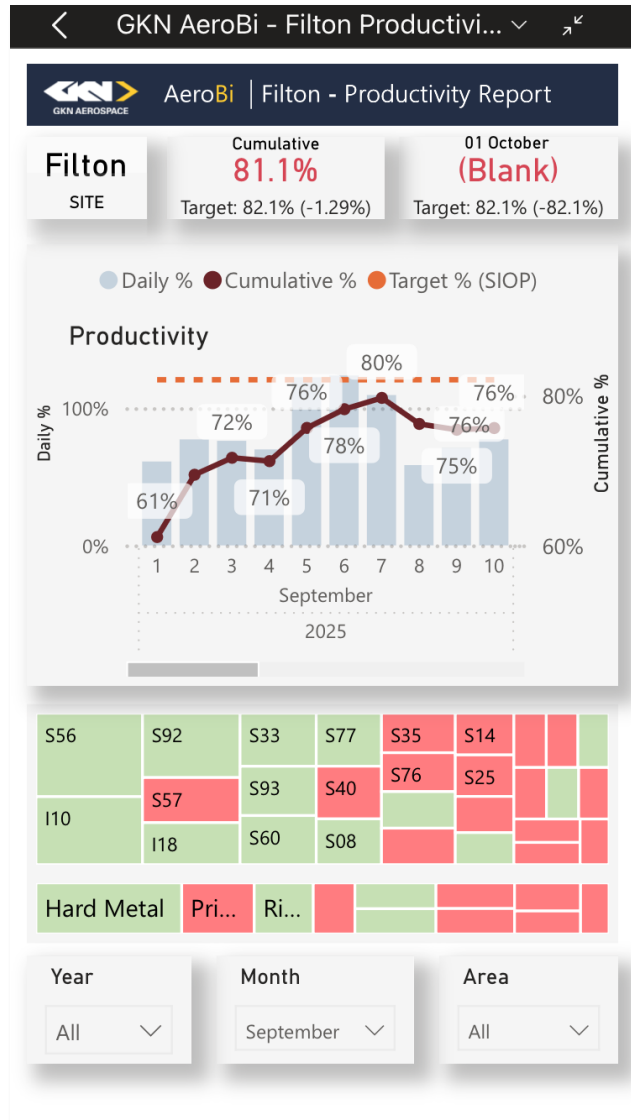

The months graph will show Cumulative data and Target data for Business Area selected only.

When a Value Stream or Cost Centre are selected the bar will show how that selection contributed to that Business Areas data.

PowerBi App - Productivity Report

Scroll down to view months graph.

The data cards show the area that the data is showing for, Cumulative - Green is plus, Red is minus, Target, delta cumulative from target, and the previous days - if NA is shown the report hasn't been updated or the month selection isn't for the current month.

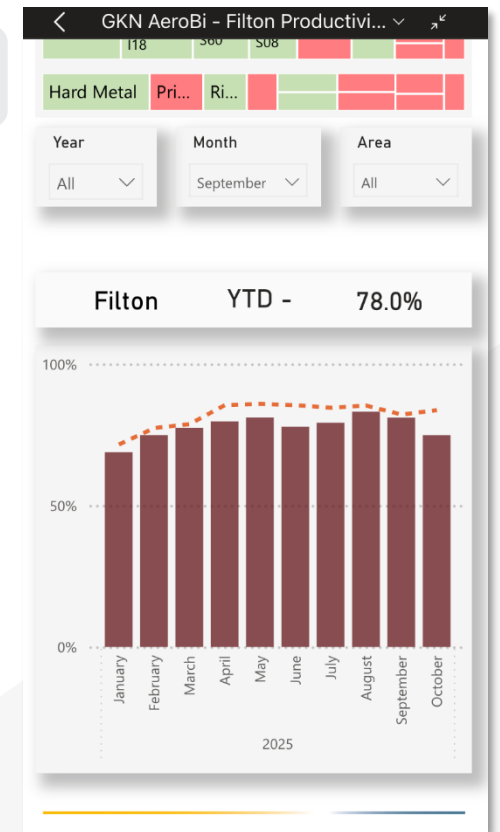

The main graph shows Daily data on the left y-axis, visualised as a bar chart, a Cumulative data on the right y-axis, visualised as a solid line with data points and a Target visualised as a dashed line.

In mobile view the graph is shows up to 9 days at a time, scrolling from left to right gives the user full visual of the month.

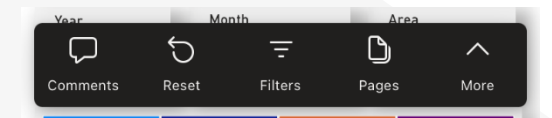

Green/Red visual shows what areas are above or below target. The farther an area is from its target, the larger the box appears.

Selecting a Business Area, Value Stream or individual Cost Centre will update the charts and data to the selected area.

Drop down filtering for Dates and Business Area.

Select Pages from the ribbon that appears at the bottom or the dropdown from the top of the screen to view all pages.

Rotating your mobile horizontally will display the tracker into landscape mode.

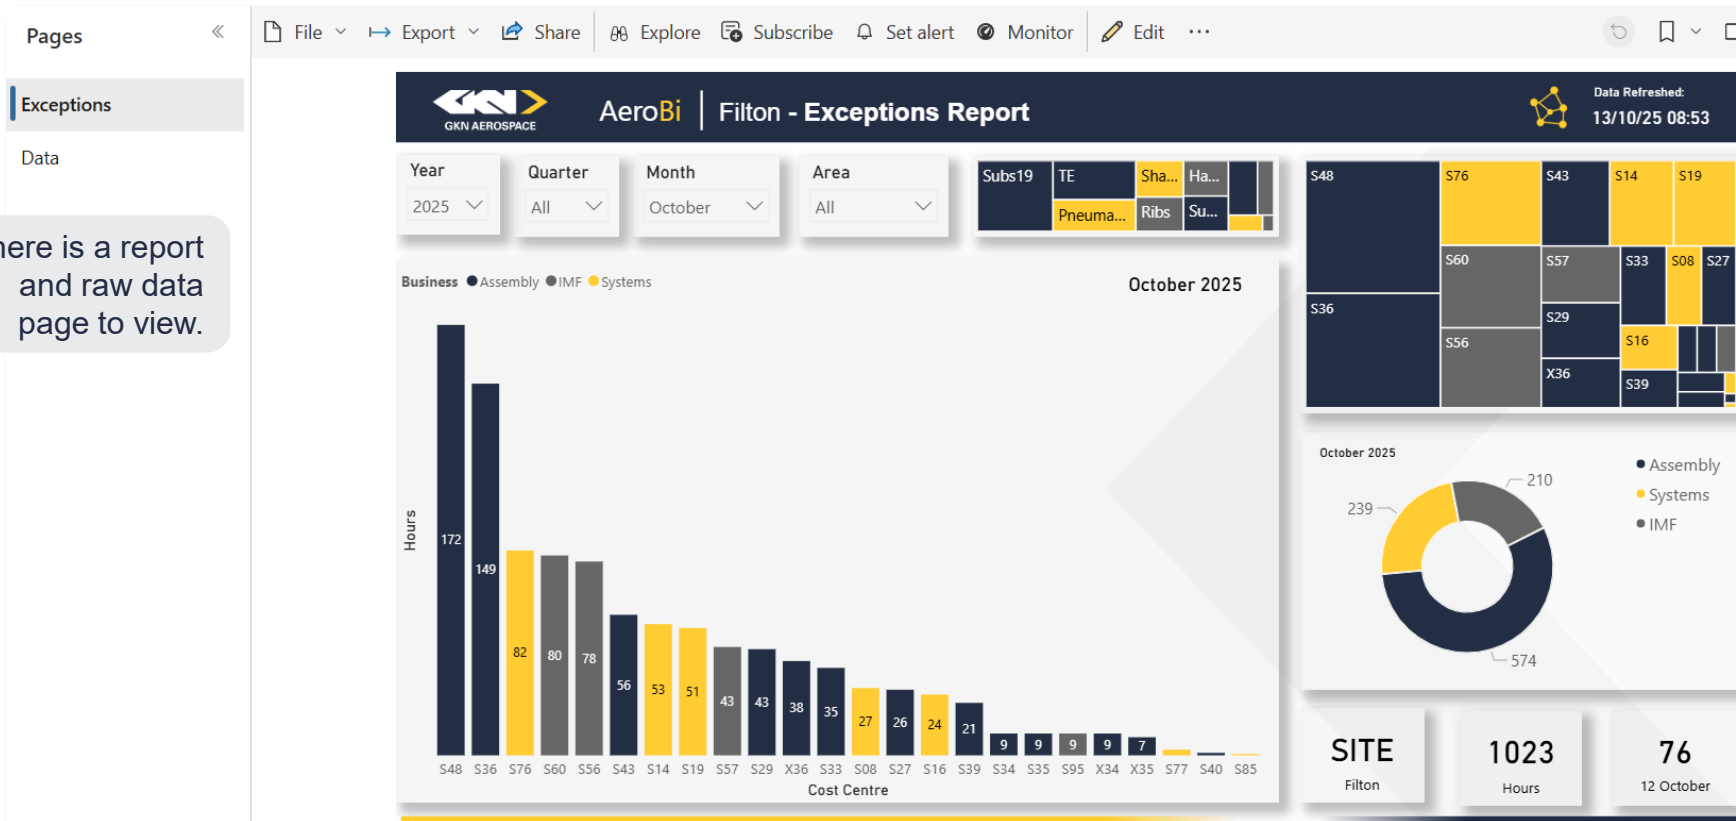

Exceptions Report

Use the drop down to view page selection.

Similar lay out and configuration to the Productivity Report. Designed to view the number of exceptions in hours for any selected area.

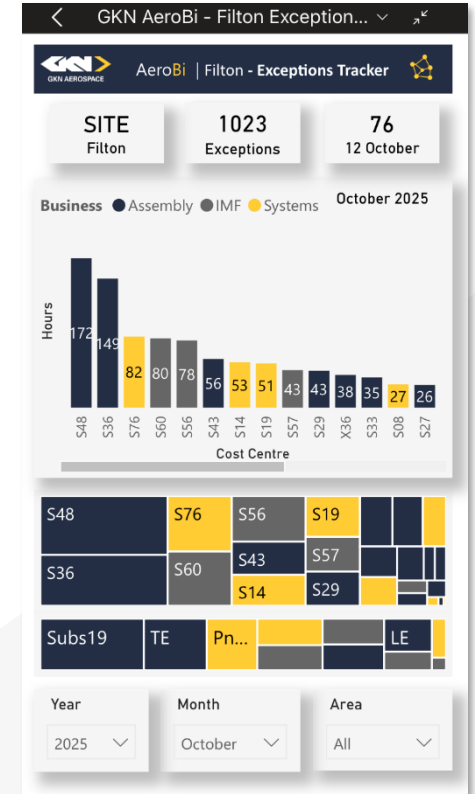

The size of the area box relates to the number of exception hours in that area – bigger in size = larger number of hours.

There is a report and raw data page to view.

Fabric on web browser

PowerBi on mobile app

Simple donut chart to view each business area.

Scroll down on the mobile app to view.

Area selected, total number of exception hours for area/date selected and total for the previous day visual cards.

Further Information

The dashboard is now live and ready to be shared with business leaders, along with this introduction pack.

Additional reports/trackers are currently in development and will be released through the dashboard in due course, accompanied by further communications.

We welcome any questions, feedback, or ideas to enhance the dashboard and reports - please feel free to reach out to any member of the team.
